One Shelter Rock Road
North Hills, New York 11576

Re: Phase I ESA Documentation
251 Searingtown Road, North Hills, NY
NPV #13008

Dear Chairman Kass and Members of the Planning Board:

Nelson, Pope & Voorhis, LLC (“NP&V”) was retained by the property owner to prepare a Phase I Environmental Site Assessment (“ESA”) and conduct various follow up investigations on the subject property. Pursuant to your request, enclosed please find the Phase I ESA (dated August 23, 2013). Additionally, the Phase II ESA (dated November 13, 2013) is enclosed, which details various investigations of environmental conditions on the property. Since the preparation of the Phase II ESA, additional work was conducted to investigate and address environmental conditions on the property. These activities are outlined below:

1. Additional investigation was performed to confirm whether the former building was connected to the public sewer system (see Attachment 1). These investigations indicated that the former building was not connected to the public sewer system. The sanitary waste pipe connection from the former house was cut and sealed approximately 100 feet from the former building. Additional investigation is planned to locate the on-site cesspools and properly abandon the system in accordance with Nassau County Dept. of Health and EPA requirements.
2. The contaminated sediment within the existing storm drains in the driveway and parking area was removed. Waste manifests documenting the proper disposal of this sediment are provided as Attachment 2.
3. The on-site fuel oil tank was abandoned and removed (see Attachment 3).

Please feel free to contact use with any questions or concerns. Thank you.

Very truly yours,
NELSON, POPE & VOORHIS, LLC

Carrie O’Farrell, ACIP
Partner/Division Manager

Re: Sewer Disconnection Letter
251 Searingtown Road, Manhasset

Dear Ms. Ho:

Nelson, Pope & Voorhis, LLC (NP&V) personnel completed a dye test on the existing sanitary system in order to confirm whether or not the building was connected to the Nassau County Municipal Sewage Collection System. In order to make this determination, dye was placed in the clean out pipe located off the southeast corner of the house and water was pumped into the pipe. Three (3) Nassau County Sewer manhole covers located on the west side of Searingtown Road were opened and inspected for evidence of any dye. No evidence was observed in any of the manholes. In order to determine if the sewer connection had been completed in the area of the old (original) driveway on the Long Island Expressway North Service Road a manhole located downstream of the subject property was inspected for evidence of dye. Again, no dye was observed in this manhole confirming the subject property was never connected the Nassau County Municipal Sewage Collection System.

Based on the information provided above, NP&V personnel witnessed the pipe camera inspection and location survey, excavation of the on-site sanitary system pipe and capping of this pipe on November 13, 2013. Specifically, the pipe camera inspection determined the location of the pipe approximately 100 feet away from the southeast corner of the house. This area was excavated and a clay pipe was found approximately 14 feet below grade. The pipe was broken and sealed with concrete to prevent any future use of the on-site system. Attached are photographs documenting the capping of the pipe.

Please do not hesitate to contact me if you have any questions.

Very truly yours,
Nelson, Pope & Voorhis, LLC

Floor Drain Remediation Work Plan
251 Searingtown Road, Manhasset

Nelson, Pope & Voorhis, LLC (NP&V will coordinate, supervise and complete the proposed remediation of one (1) floor drain at the above referenced address. The floor drain is located in the basement of the building and discharges directly to the soils beneath the concrete floor. The following describes the work to be performed to remediate this floor drain.

a) Utilize a posthole digger to excavate the soil from the floor drain located in the basements of the three (3) buildings. The excavation of each floor drain will be completed to visibly clean soil.
b) Provide 55 gallon steel drums for the disposal of the soil excavated from the floor drains.
c) Collect one (1) waste characterization sample of removed sediment for disposal purposes, as required by the disposal facility.
d) Collect one (1) end-point sample from the drain and analyze the sample for the presence of metals.
e) Provide clean sand to backfill the excavation and re-concrete the area of the floor.
f) The non-hazardous soil contained in drums will be transported to an approved facility for disposal. Waste manifest will be obtained and provided for your records along with the closure report.
g) A closure report will be prepared outlining the remediation process, end-points results for submittal to the USEPA.
Lisa,

Attached please find a copy of the Limited Phase II ESA report and the Remediation Work Plan. Please review and let me know if you have any comments or if I can proceed with the remedial activities.

Thanks,

Steve

Re: Floor Drain Remediation Closure Letter
251 Searingtown Road, Manhasset
NP&V Job# 13008

Dear Ms. Kim:

Nelson, Pope & Voorhis, LLC (NP&V) coordinated and supervised the remediation of a floor drain in the basement of the house located at the above referenced property in accordance with the approved work plan. A copy of the work plan and your email approving the work plan are attached for your review. All of the work was completed in September of 2013; however, no closure report was generated after the work was completed. The following is a synopsis of the work that was completed.

NP&V personnel supervised the remedial activities which entailed breaking open the concrete floor in the area of the floor drain in order to access the soils at the bottom of the drain. A posthole digger and stainless steel hand auger were utilized to excavate the soils. All soil excavated from the floor drain were placed in 55 gallon drum. The bottom of the floor drain was excavated to a depth approximately three and a half (3.5) feet below the bottom of the floor drain and approximately two (2) feet wide. One (1) 55 gallon of soil was generated, transported and disposed of at an approved disposal facility. A copy of the waste disposal manifest is provided as an attachment to this document. Once the excavation was completed, an endpoint sample was collected from the bottom of the excavation. This sample was placed in the appropriate laboratory supplied sampling vessels and an ice filled cooler for transportation to a certified laboratory. The sample was analyzed for the presence of semi-volatile organic compounds and metals based on the New York State Department of Environmental Conservation (NYSDEC) Part 375 parameters. The laboratory results revealed that no elevated concentrations were present in the sample. A copy of the laboratory datasheets is provided as an attachment to this letter.

Based on the information provided in this letter and accompanying waste manifest and laboratory datasheets, if all of the information is sufficient please provide a sign off letter.

Please do not hesitate to contact me if you have any questions.

Very truly yours,

NELSON, POPE & VOORHIS, LLC

Date Prepared: 09/23/2013

Preparation Method: EPA 3050B
Analytical Method: EPA 6010 C

### Data Qualifiers Key Reference:

3.E  Compound reported at a dilution factor.
4.F  Spike recovery does not meet QC criteria due to high target compound concentration.
4.H  Batch spike recovery out of range due to matrix inconsistency.
4.L  Surrogate recovery is outside the acceptance criteria.
4.N  LCS recovery below QC limit.
MRL  Minimum Reporting Limit
**NON-HAZARDOUS WATER MANIFEST**

1. Generator's US EPA ID No. .................................
2. Manifest Doc. No. ........................................

3. Generator's Name and Mailing Address
   - Commercial Property
   - Scovington Rd
   - Manhasset

4. Generator's Phone ( ) .................................

5. Transporter 1 Company Name
   - AARCO ENVIRONMENTAL SERVICES CORP.

6. US EPA ID Number
   - N Y R 0 0 0 1 0 7 3 2 6

7. Transporter 2 Company Name

8. US EPA ID Number

9. Designated Facility Name and Site Address
   - Transverse
   - 42-14 19th Ave Askin NY
   - N D P077444263

10. US EPA ID Number

11. Waste Shipping Name and Description
    - NON. HAZ Contaminated Dirt

12. Containers No. Type Total Quantity Unit
    - 1 Drum 400 P

13. Description for Materials Listed Above
    - NYC03113 1-55(6)

14. Handling Codes for Wastes Listed Above

15. Special Handling Instructions and Additional Information
    - EMERGENCY PHONE # 631-586-5900

16. GENERATOR'S CERTIFICATION: I certify the materials described above on this manifest are not subject to federal regulations for reporting proper disposal of Hazardous Waste.
